Sardana Documentation - top level

(User's Guide and Developers Guide will be discussed in more details later on)

- [User's Guide](#)
 - [Overview](#)
 - [Getting started](#)
 - [Spock](#)
 - [Sardana-Taurus Widgets](#)
 - [Scans](#)
 - [Diffractometer control](#)
 - [Adding real elements](#)
 - [Macro environment](#)
 - [Macro Hooks](#)
 - [Macro logging and report](#)
 - [Standard macro catalog](#)
 - [Environment variable catalogue](#)
 - [Configuration](#)
 - [Screenshots](#)
 - [FAQ](#)
- [Developer's Guide](#)
 - [Overview](#)
 - [Writing macros](#)
 - [Writing controllers](#)
 - [Writing recorders](#)
 - [Sardana core development](#)
 - [Sardana Testing](#)
 - [API](#)
 - [Migration guide](#)
 - [Examples](#)
 - [Development guidelines](#)
- [Sardana Enhancement Proposals](#)

- [Glossary](#)
 - Nice chapter
- [To do](#)
 - It lists missing documentation (TODOs).
 - It is autogenerated.
- [History of changes](#)
 - Competes with CHANGELOG.md
 - It could be removed
 - [History of modifications](#)
 - [Version history](#)
- [Index](#)
- [Module Index](#)
- [Search Page](#)

Color guide:

- Highlight color:
 - **green** - more or less fine
 - **yellow** - requires work
 - **red** - completely missing or wrong
 - **violete** - new contents
- Text color:
 - [Links from documentation](#)
 - Zibi's comments

User's Guide

● **Overview**

- Requires review and small corrections. But in general OK
- [What do we “sell” to our users](#)
- [Starting a procedure](#)
- [Taurus as a toolkit for applications](#)
- [Configure – don't program](#)
- [How to write your own procedure](#)
- [How to adapt it to your own hardware](#)
- [Symbolic Sketch](#)

● **[Getting started](#)**

- [Installing](#)
 - Upgrade installation instructions on Windows
- [Working directly from Git](#)
- [Dependencies](#)
- [Running the server](#)
- [Running the client](#)

● **[Spock](#)**

- [Starting spock from the command line](#)
- [Starting spock with a custom profile](#)
- [Spock IPython Primer](#)
- [Executing macros](#)

- Normal and Advanced spock syntax
- [Stopping macros](#)
- [Exiting spock](#)
- [Getting help](#)
- [Moving motors](#)
- [Counting](#)
- [Scanning](#)
- Accessing macro data
- Editing macros (edmac)
- Debugging problems (debug, www, post_mortem)
- [Using spock as a Python console](#)
- [Using spock as a Tango console](#)
- [Sardana-Taurus Widgets](#)
 - [MacroExecutor](#)
 - [Sequencer](#)
 - Load from file with spock syntax
 - MacroButton
 - [Experiment Configuration](#)
 - Snapshot Group
 - Storage
 - ShowScan
 - [Sardana Editor](#)
- [Scans](#)
 - [Step scans](#)
 - [Continuous scans](#)
 - Scan snapshot
 - [Configuration](#)
 - Environment variables are defined here. This should be a link to environment variables
- Diffractionmeter control
- Adding real elements
- Macro environment

- Hooks

- Macro logging and report

- Standard macro catalog

- How to generate the catalogue automatically from the Sardana macros?
 - [motion related macros](#)
 - [counting macros](#)
 - [diffractometer related macros](#)
 - [environment related macros](#)
 - [list related macros](#)
 - [measurement configuration macros](#)
 - [general hooks macros](#)
 - [advanced element manipulation macros](#)
 - [reload code macros](#)
 - [scan macros](#)

- Environment variable catalogue

- Screenshots

- could be updated but not priority
 - [Sardana oriented graphical user interfaces](#)
 - [Graphical user interface screen shots](#)

- FAQ

- are very poorly explained, missing links
 - [What is the Sardana SCADA and how do I get an overview over the different components?](#)
 - [How do I install Sardana?](#)
 - [How to work with Taurus **GUI**?](#)
 - [How to produce your own Taurus **GUI** panel?](#)
 - [How to call procedures?](#)
 - [How to write procedures?](#)
 - [How to write scan procedures?](#)
 - [How to adapt SARDANA to your own hardware?](#)

- [How to add your own file format?](#)
- [How to use the standard macros?](#)
- [How to add conditions in macros?](#)
- [How to write your own Taurus application?](#)
- [Which are the standard Taurus graphical GUI components?](#)
- [How to write your own Taurus widget?](#)
- [How to work with the graphical GUI editor?](#)
- [What are the minimum software requirements for sardana?](#)
- [How to configure the system?](#)
- [How to write your own Taurus schema?](#)
- [What are the interfaces to the macro server and the pool?](#)
- [What are the data file formats used in the system and how can I read them?](#)
- [What is the file format of the configuration files?](#)
- [How to access EPICS?](#)

Developer's Guide

- [Overview](#)

- Each of the elements contains links to the [Reference](#) (description of each of the concepts), [Sardana API](#), [Tango API](#)

- [Global overview](#)
- [Macro Server](#)
- [Pool](#)
- [Controller](#)
- [Motor](#)
- [Pseudo motor](#)
- [IO register](#)
- [Trigger/gate](#)
- [Counter/timer](#)
- [OD experiment channel](#)

- 1D experiment channel
 - 2D experiment channel
 - Pseudo counter
 - Measurement Group
 - Motor Group
 - Instrument
- Writing macros
 - General macro development
 - Macro result
 - Stopping/aborting a macro
 - Scan macro development
- Writing controllers
 - What is a controller
 - How to write a motor controller
 - How to write a counter/timer controller
 - How to write a 0D controller
 - How to write a 1D controller
 - Better document them after SEP2
 - How to write a 2D controller
 - Better document them after SEP2
 - How to write a trigger/gate controller
 - How to write an I/O register controller
 - How to write a pseudo motor controller
 - How to write a pseudo counter controller
- Writing recorders
 - Overview
 - What is a recorder?
 - Type of recorders
 - Writing a custom recorder
 - Configuration
- Developing core
- Sardana Testing

- [General test documentation](#)
- [Run Sardana tests from command line](#)
- [Test-driven development example](#)
- [Sardana Unit Test examples](#)
- [API](#)
 - [Macro API](#)
 - [Controller API](#)
 - [Motor API](#)
 - [I/O register](#)
 - [Counter/timer API](#)
 - [0D experiment channel API](#)
 - [1D experiment channel API](#)
 - [2D experiment channel API](#)
 - [Trigger/gate API](#)
 - [Pseudo motor API](#)
 - [Pseudo counter API](#)
 - [Measurement group API](#)
 - [Pool tango API](#)
 - [Macro server tango API](#)
 - [Library](#)
 - Macros documentation is duplicated here!
 - [Test API](#)
- [Migration guide](#)
 - Some part of it competes with CHANGELOG.md.
 - But it would be an interesting chapter for eventual future migration guides.
 - [How to migrate your macro code](#)
 - [How to migrate your controller code](#)
- [Examples](#)
 - [Macro examples](#)
 - [Controller examples](#)

- [Development guidelines](#)
 - [Overview](#)
 - [How to contribute to sardana](#)
 - Competes with CONTRIBUTING.md
 - ⊖ [Cloning and forking sardana from Git](#)
 - ⊖ [The old code repositories](#)
 - [Documentation](#)
 - [Coding conventions](#)
